

IR & IR+ SENSORS

For GLACIÄR MIDI

Long Life.
Low Maintenance.
High Confidence.

Powered by infrared sensing, the technology ensures precise and stable refrigerant gas detection by targeting each gas's unique absorption wavelength.

**NEW
SENSOR-
LINE**

The **GLACIÄR MIDI IR & IR+** is part of the latest evolution in our simply reliable gas detection range - now equipped with a cutting-edge infrared (IR) sensor designed for next-level performance in critical refrigeration environments. Built for accuracy, longevity, and low maintenance, the IR & IR+ sensor options outperforms conventional technologies with:

No false alarms

IR sensors are selective to refrigerants, ignoring cleaning agents, humidity, and other gases.

Stable performance

Immune to temperature, humidity, and oxygen variations.

Fail-safe operation

Built-in diagnostics ensure no silent failures.

Long sensor life

Years of reliable detection.

Rapid recovery

Withstands and recovers from high gas concentrations without damage.

Years of accuracy

No annual recalibration needed; holds calibration far longer than SC or electrochemical sensors.

Lower total cost of ownership

Less maintenance. Fewer false alarms. More uptime.

GLACIÄR IR & IR+ BENEFITS

- Long lifetime
- Minimal sensor drift
- No cross-sensitivity
- Immune to contamination
- No poisoning effect
- Non-depleting
- Minimal calibration requirement
- Higher accuracy
- Low Minimum Detectable Limit
- Compatible with GLACIÄR MIDI accessories

**REMOTE SENSOR
OPTION AVAILABLE**

SIMPLY RELIABLE REFRIGERANT GAS DETECTORS

IR	IR+
Cost-effective solution for standard commercial applications	Premium solution for demanding and critical applications
Dedicated sensor optimized for each common refrigerant	Broader refrigerant coverage using only a single article number and expandability through cross-reference factors
New sensor housing engineered for enhanced performance, using ultrasonic welding technology to achieve robustness and IP67 protection.	
Detection range: Typically 0–5000 ppm; up to 0–10 000 ppm for some gases	Detection range: Typically 0–2000 ppm (some ranges lower)
Accuracy: ±5% of full scale	
Higher detection range for general monitoring	Lower detection limits for early leak detection
Lower Detectable Limit (LDL): Higher (about 150–300 ppm)	Lower Detectable Limit (LDL): Lower (60–100 ppm depending on the gas)
Operating Temperature Range: –10°C to +50°C	Operating Temperature Range: –40°C to +60°C

IR+
supports more
refrigerant gases and
has established
cross-reference factors
to detect additional gases
using one sensor
type.
